MEMORANDUM FOR THE RECORD

SUBJECT: Telephone Conversation with [REDACTED]

25X1A

On 26 February at 1550 [REDACTED] called in reference to the 20X enlarger. He stated that the cooling problem required a $1\frac{1}{2}$ to 2 horse-power motor. As a result said motor must use either 220 volts or 440 volts. Tentatively he was advised to use a 220 volt motor unless advised otherwise within one week. This means that the area we are to use the 20X enlarger in should be wired for 220 volts. [REDACTED] would like to be advised of our decision. He also suggested that since we are still in the designing stage for the plate holder that a 10 x 12" plate might be used rather than a $9\frac{1}{2}$ x $9\frac{1}{2}$ " plate. This would allow the use of standard sized film and if $9\frac{1}{2}$ x $9\frac{1}{2}$ " format size is desired the holder can be masked or designed to take the smaller size. Ed suggested that Bob [REDACTED] pay a visit to [REDACTED] in the near future to see the developments of the 20X enlarger so that if he wished, he could change the color of the paint! Ed then thanked everyone for making the arrangements at PIC and NPC for his visit there.
